Application/Control Number: 10/635,713

Art Unit: 2878

This is in response to Applicants' Preliminary amendment filed August 5, 2003.

The following is an examiner's statement of reasons for allowance: The prior-art fails to teach an optoelectronic filter device, among other features comprising: a first resonant cavity having a thickness and a composition so as to exhibit a multiplicity of resonant transmission modes over a wavelength range; a second resonant cavity with a thickness and a composition so as to exhibit a single resonant transmission mode; means for applying electrical voltage to the second cavity so as to vary the thickness of the cavity and the spectral position of the associated resonant mode so that it coincides with any one of the resonant modes of the first cavity to produce a filter with two resonant cavities.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

I) Hattori et al 6,518,857 disclose a multimode dielectric resonator device with plural resonator stage.
